us-east-1.console.aws.amazon.com/lambda/home?region=us-east-1#/functions/RequestUnicorn?fullscreen=true&newFunction=true&tab=code

ServicesSearch[Alt+S]

Successfully updated the function RequestUnicorn.

FileEditFindViewGoToolsWindowTestDeploy

Go to Anything (Ctrl-P)

RequestUnicorn / index.js

```
1 const randomBytes = require('crypto').randomBytes;
2 const AWS = require('aws-sdk');
3 const db = new AWS.DynamoDB.DocumentClient();
4
5 const fleet = [
6   {
7     Name: 'Angel',
8     Color: 'White',
9     Gender: 'Female',
10   },
11   {
12     Name: 'Gill',
13     Color: 'White',
14     Gender: 'Male',
15   },
16   {
17     Name: 'Rocinante',
18     Color: 'Yellow',
19     Gender: 'Female',
20   },
21 ];
22
23 exports.handler = (event, context, callback) => {
24   if (!event.requestContext.authorizer) {
25     errorResponse('Authorisation not configured', context.awsRequestId, callback);
26     return;
27   }
28
29   const rideId = toUrlString(randomBytes(16));
30   console.log('Received event', rideId, event);
31
32   // Because we're using a Cognito User Pools authorizer, all of the claims
33   // included in the authentication token are provided in the request context.
34   // This includes the username as well as other attributes.
35   const username = event.requestContext.authorizer.claims['cognito:username'];
36
37   // The body field of the event in a proxy integration is a raw string.
38   // In order to extract meaningful values, we need to first parse this string
39   // into an object. A more robust implementation might inspect the Content-Type
40   // header first and use a different parsing strategy based on that value.
41   const requestBody = JSON.parse(event.body);
42
43   const pickupLocation = requestBody.PickupLocation;
44   const unicorn = findUnicorn(pickupLocation);
45
46   recordRide(rideId, username, unicorn).then(() => {
47     // You can use the callback function to provide a return value from your Node.js
48     // Lambda functions. The first parameter is used for failed invocations. The
49     // second parameter specifies the result data of the invocation.
50
51     // Because this Lambda function is called by an API Gateway proxy integration
52     // the result object must use the following structure.
53   })
54 }
```
